DETAILED ACTION***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 08/03/2004 has been entered.

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-6 have been rejected under 35 U.S.C. 102(e) as being unpatentable by Chambers et al. (US 5959536).

Claim 1, Chambers discloses an information signal device connected to a network (Fig. 1), comprising:

at least one object (Messaging) for generating messages concerning events occurring in the information signal device, wherein said messages have specified and unspecified destinations (Col. 8, lines 50-Col. 10, lines 14);

an event manager for directing the messages generated by the at least one object to destinations inside and outside the information signal device (Col. 10, lines 15-49);

a network messenger (Communications) for transmitting generated messages to a specified destination on the network directed by the event manager (Col. 10, lines 50-Col. 11, lines 50);

a broadcast manager (must have in order to broadcast messages; Col. 11, lines 55-56) for broadcasting the generated messages having unspecified destinations to the network as directed by the event manager, and wherein the messages generated by the object are delivered by exchanging the messages with the event manager in a one-to-one communication, and wherein the at least one object does not discriminate whether the destinations of the messages are outside or inside the information signal device (Col. 11, lines 50-Col. 12, lines 34).

Claim 2, Chamber further discloses wherein the broadcast manager broadcasts each message with reference information attached thereto, the reference information changing according to a predetermined sequence at each message broadcasting, and holds the broadcast messages and transmits the held messages in response to a transmission request from the event manager (Col. 10, lines 27-49).

Claim 3; Chamber further discloses wherein the broadcast manager also receives broadcast messages from the network, and recognizes a change in reference information attached to the a broadcast message

Art Unit: 2611

received from the network, and requests a sender of the broadcast message to retransmit the message in response to a result of the recognition (Errors, Col. 9, lines 35-55).

Claim 4, Chamber further discloses wherein the broadcast manager broadcasts, in a predetermined repetition period, verification information having a predetermined relationship with the reference information (Col. 11, lines 55-Col. 12, lines 15).

Claim 5, Chamber further discloses wherein the broadcast manager deletes the held message at a moment a duration longer than twice the predetermined repetition period elapses (by putting the messages on an internal queues... Col. 9, lines 5-Col. 10, lines 14).

Claim 6, Chamber further discloses wherein the broadcast manager receives broadcast messages from the network, and also receives verification information transmitted to the network, and requests a device, which has transmitted the verification information, to transmit the message when there is no predetermined relationship between the received verification information and the reference information attached to the received message (Col. 12, lines 5-65+ and Col. 13, lines 60-28).
